Contents

Volume 106 (1) 1989

Patrick, T. D., Lewer, C. E. and Pain, V. M.  
Preparation and characterization of cell-free protein synthesis systems from oocytes and eggs of *Xenopus laevis* 1

Van den Eynde, H., Mazabraud, A. and Denis, H.  
Biochemical research on oogenesis. RNA accumulation in the oocytes of the newt *Pleurodeles waltl* 11

Garzino, V., Berenger, H. and Pradel, J.  
Expression of laminin and of a laminin-related antigen during early development of *Drosophila melanogaster* 17

Fundele, R., Norris, M. L., Barton, S. C., Reik, W. and Surani, M. A.  
Systematic elimination of parthenogenetic cells in mouse chimaeras 29

Beddington, R. S. P., Morgernstern, J., Land, H. and Hogan, A.  
An *in situ* transgenic enzyme marker for the midgestation mouse embryo and the visualization of inner mass clones during early organogenesis 37

A set of cell surface glycoproteins forms an early marker of cell position, but not cell type, in the root apical meristem of *Daucus carota* L. 47

Simpson, P. and Carteret, C.  
A study of *shaggy* reveals spatial domains of expression of *achaete-scute* alleles on the thorax of *Drosophila* 57

Taylor, M., Treisman, R., Garrett, N. and Mohun, T.  
Muscle-specific (CArG) and serum-responsive (SRE) promotor elements are functionally interchangeable in *Xenopus* embryos and mouse fibroblasts 67

Mesoderm-inducing properties of INT-2 and kFGF: two oncogene-encoded growth factors related to FGF 79

Kalcheim, C. and Teillet, M.-A.  
Consequences of somite manipulation on the pattern of dorsal root ganglion development 85

Karr, T. L. and Kornberg, T. B.  
fushi tarazu protein expression in the cellular blastoderm of *Drosophila* detected using a novel imaging technique 95

Bissen, S. T. and Welsblat, D. A.  
The duration and compositions of cell cycles in embryos of the leech, *Helobdella triserialis* 105

Gard, A. L. and Pfleffer, S. E.  
Oligodendrocyte progenitors isolated directly from developing telencephalon at a specific phenotypic stage: myelogenic potential in a defined environment 119

Maine, E. M. and Kimble, J.  
Identification of genes that interact with *glp-1*, a gene required for inductive cell interactions in *Caenorhabditis elegans* 133

Ambrosio, L., Mahowald, A. P. and Perrimon, N.  
l(l)pole hole is required maternally for pattern formation in the terminal regions of the embryo 145

Bloom, T. L.  
The effects of phorbol ester on mouse blastomeres: a role for protein kinase C in compaction 159

Ruiz I Altaba, A. and Melton, D. A.  
Bimodal and graded expression of the *Xenopus* homeobox gene *Xhox3* during embryonic development 173

Anderson, H. and Tucker, R. P.  
Spatial and temporal variation in the structure of the basal lamina in embryonic grasshopper limbs during pioneer neurone outgrowth 185

Sabbag, K. R., Casanova, J. E. and Grabel, L. B.  
Plasminogen activator expression in F9 teratocarcinoma embryoid bodies and their endoderm derivatives 195

Gillespie, L. L., Paterno, G. D. and Slack, J. M. W.  
Analysis of competence: receptors for fibroblast growth factor in early *Xenopus* embryos 203
