The Journal of Cell Biology publishes papers that report substantial and original findings on the structure and function of cells, organelles, and macromolecules. The journal is particularly interested in bringing attention to new knowledge arising from the application of molecular, biophysical, genetic, immunological, or ultrastructural techniques as they apply to the correlation of structure with function. Also included are studies that report progress in the areas of gene organization and expression, somatic cell genetics, cell motility, cellular architecture, membrane and organelle dynamics, and cell differentiation.

The Journal of Cell Biology, edited in cooperation with The American Society for Cell Biology, is published by The Rockefeller University Press.

Experimental Approaches to Mammalian Development
JANET ROSSANT and ROGER A. PEDERSEN
This comprehensive volume discusses recent advances in the experimental analysis of the mammalian embryo from cellular, molecular, genetic and biochemical viewpoints. For the benefit of undergraduate and graduate students, the authors describe the fundamentals of embryology and emphasise general principles, however, the attention to detail included in each chapter will also benefit established investigators.

'... a valuable addition to the library of any serious student of the mammalian embryo' Nature

'From beginning to end this is a book of the highest quality of content and readability... it defines many areas for future research in mammalian embryology.' Science
