The aim of Development is to act as a forum for all research that offers a genuine insight into mechanisms of development. Manuscripts will be considered primarily with respect to this aim. Studies on both plant and animal development are welcome and can be focused upon any aspect of the developmental process, at all levels of biological organization from the molecular and cellular to the tissue levels.

Development now offers rapid publication (average 9 weeks from acceptance): the following criteria apply:
(i) the revised manuscript is accompanied by a corresponding word-processor disk
(ii) no colour plates
(iii) author does not require to see proofs
(iv) 200 free reprints only
(v) manuscript conforms to journal style i.e. no subediting necessary – see Information for contributors.
(vi) Figures are labelled in journal style.

Orders for 1990, which can be in £ Sterling/Dollars or using Access/Visa credit cards, should be sent to The Biochemical Society Book Depot, PO Box 32, Commerce Way, Colchester CO2 8HP, UK [telephone Colchester (0206) 46351; 24-hour ordering by Fax (0206) 549331 - USA 44 206 549331] or to your normal agent or bookseller. Orders must be accompanied by payment.

Copies of the journal for subscribers in the USA and Canada are sent by air to New Jersey for delivery with the minimum delay (second class postage paid at Rahway, NJ and at additional mailing offices).

Send address corrections to Development, c/o Mercury Airfreight International Inc., 2323 Randolph Avenue, Avenel, New Jersey 07001, USA (US Mailing Agent).

Publication of a paper in this journal implies that authors will make available specialized reagents (for example antibodies, DNA probes) to other scientists in the field who require them for bona fide purposes.
For detailed instructions to authors, please see back cover.

Please contact The Biochemical Society Book Depot for prices.

(i) Authors may make copies of their own papers in this journal without seeking permission from The Company of Biologists Limited, provided that such copies are for free distribution only: they must not be sold.
(ii) Authors may re-use their own illustrations in other publications appearing under their own name without seeking permission.
(iii) Specific permission will not be required for photocopying copyright material in the following circumstances.
(a) For private study, provided the copying is done by the person requiring its use, or by an employee of the institution to which he/she belongs, without charge beyond the actual cost of copying.
(b) For the production of multiple copies of such material, to be used for bona fide educational purposes, provided this is done by a member of the staff of the university, school or other comparable institution, for distribution without profit to student members of that institution, provided the copy is made from the original journal.
(iv) For all other matters relating to the reproduction of copyright material written application must be made to
Dr R. J. Skaer, Company Secretary, The Company of Biologists Limited, Department of Zoology, Downing Street, Cambridge CB2 3EJ, UK.

Cover photograph
Sections through Drosophila embryos stained with anti-twist antibodies. The twist protein is expressed in prospective mesoderm cells. Stages of mesodermal invagination are shown from the beginning of nuclear migration through invagination, mitosis and dispersal of the mesoderm. For further details see the paper by M. Leptin and B. Grunewald in this issue, Development 110, 73–84.
DEVELOPMENT and JOURNAL OF CELL SCIENCE

Two journals making great strides, at a price you can afford!

We want to give you full access to these major journals

Take out a personal subscription to each for only 1/7 - 1/8 their normal subscription price

Advantages: wide international circulation; Rapid publication - 13 weeks from acceptance to publication; rapid refereeing; large format; 200 free reprints; highest quality reproduction; all profits put back into science - the journals are published by The Company of Biologists Limited, a registered charity directed by working scientists; all profits are invested in supporting meetings, summer schools, etc.

Personal Subscription Coupon ... Reductions for Individuals

YES, I wish to subscribe for 1990 as indicated:

DEVELOPMENT

- Please send me a 1990 subscription (13 issues) (January to December) to DEVELOPMENT, at the special individual rate of only $95.00 (U.S. & Canada) £65.00 (rest of world)

n.b. Journals are sent usually by air or ASP to subscribers worldwide.

JOURNAL OF CELL SCIENCE

- Please send me a 1990 subscription (13 issues) (January to December) to JOURNAL OF CELL SCIENCE, at the special individual rate of only $95.00 (U.S. & Canada) £65.00 (rest of world)

n.b. Journals are sent usually by air or ASP to subscribers worldwide.

Prices include charges for postage and handling.

24-hour ordering by Fax: (0206) 549331 - USA 44 206 549331
The Company of Biologists Ltd.
Is a registered charity and owns *Development* and *Journal of Cell Science*

We offer:

- Speed and quality of publication
- We pay referees for review and rapid return of manuscripts
- 3 month publication time with superb quality halftones
- 200 free offprints

Savings on library, research and teaching budgets

- Directors give their time free – it cuts the cost of publications
- No page charges and our journals still cost less per page than many commercial journals
- We waive all copyright fees for teaching purposes

Activities of benefit to biology

- We finance conferences and summer schools in the field of the journals
- We give grants to major biological societies
- We give free publications to selected 3rd world libraries
Have you the time not to read BioEssays?

Published monthly by The Company of Biologists, BioEssays covers advances in the fields of molecular, cellular and developmental biology. The journal is short, sharp and full of up to date reviews and discussions on new ideas and discoveries.

To subscribe, complete and mail the coupon or fax to one of the numbers below.

BioEssays is published for the ICSU Press by The Company of Biologists • Cambridge • England

I would like to subscribe to BioEssays at the library [ ] or individual [ ] rate for 1991.

Contents

Volume 110 (1) 1990

ESSAY IN DEVELOPMENT
Newman, S. A. and Comper, W. D.
'Generic' physical mechanisms of morphogenesis and pattern formation 1

CONTRIBUTED PAPERS
Placzek, M., Tessier-Lavigne, M., Jessell, T. and Dodd, J.
Orientation of commissural axons in vitro in response to a floor plate-derived chemoattractant 19

Franks, R. R., Anderson, R., Moore, J. G., Hough-Evans, B. R., Britten, R. J. and Davidson, E. H.
Competitive titration in living sea urchin embryos of regulatory factors required for expression of the CyIIIA actin gene 31

Hough-Evans, B. R., Franks, R. R., Zeller, R. W., Britten, R. J. and Davidson, E. H.
Negative spatial regulation of the lineage specific CyIIIA actin gene in the sea urchin embryo 41

Swenarchuk, L. E., Champaneria, S. and Anderson, M. J.
Induction of a specialized muscle basal lamina at chimaeric synapses in culture 51

Invasive equine trophoblast expresses conventional class I Major Histocompatibility Complex antigens 63

Leptin, M. and Grunewald, B.
Cell shape changes during gastrulation in Drosophila 73

Sangiorgi, F., Woods, C. M. and Lazarides, E.
Vimentin downregulation is an inherent feature of murine erythroproiesis and occurs independently of lineage 85

Fujimori, T., Miyatani, S. and Takeichi, M.
Ectopic expression of N-cadherin perturbs histogenesis in Xenopus embryos 97

The Drosophila segment polarity gene patched is involved in a position-signalling mechanism in imaginal discs 105

Adams, D. S., Keller, R. and Koehl, M. A. R.
The mechanics of notochord elongation, straightening and stiffening in the embryo of Xenopus laevis 115

Yu, C.-K. C., Tsui, L.-C. and Breitman, M. L.
Homologous and heterologous enhancers modulate spatial expression but not cell-type specificity of the murine yF-crystallin promoter 131

Payre, F., Noselli, S., Lefrère, V. and Vincent, A.
The closely related Drosophila sry β and sry δ zinc finger proteins show differential embryonic expression and distinct patterns of binding sites on polytene chromosomes 141

Lee, J. E., Pintar, J. and Efstratiadis, A.
Pattern of the insulin-like growth factor II gene expression during early mouse embryogenesis 151

Macdonald, P. M.
bicoid mRNA localization signal: phylogenetic conservation of function and RNA secondary structure 161

Watson, M. A. and Milbrandt, J.
Expression of the nerve growth factor-regulated NGFI-A and NGFI-B genes in the developing rat 173

Martin-Morris, L. E. and White, K.
The Drosophila transcript encoded by the β-amyloid protein precursor-like gene is restricted to the nervous system 185

Sadaghiani, B. and Vielkind, J. R.
Distribution and migration pathways of HNK-1-immunoreactive neural crest cells in teleost fish embryos 197

Adler, R. R., Brenner, C. A. and Werb, Z.
Expression of extracellular matrix-degrading metalloproteinases and metalloproteinase inhibitors is developmentally regulated during endoderm differentiation of embryonal carcinoma cells 211

Corps, A. N., Brigstock, D. R., Littlewood, C. J. and Brown, K. D.
Receptors for epidermal growth factor and insulin-like growth factor-I on preimplantation trophoderm of the pig 221

Musci, T. S. and Mullen, R. J.
All-or-none craniorachischisis in Loop-tail mutant mouse chimeras 229

Birr, C. A., Fristrom, D., King, D. S. and Fristrom, J. W.
Ecdysone-dependent proteolysis of an apical surface glycoprotein may play a role in imaginal disc morphogenesis in Drosophila 239

Hake, L. E., Alcivar, A. A. and Hecht, N. B.
Changes in mRNA length accompany translational regulation of the somatic and testis-specific cyt ochrome c genes during spermatogenesis in the mouse 249

Tomlinson, C. R., Kozlowski, M. T. and Klein, W. H.
Ectoderm nuclei from sea urchin embryos contain a Spec–DNA binding protein similar to the vertebrate transcription factor USF 259

Takeda, H., Suematsu, N. and Mizuno, T.
Transcription of prostatic steroid binding protein (PSBP) gene is induced by epithelial–mesenchymal interaction 273

Hauwshell, A. J., Corke, F. M. K., Hedley, C. L. and Wang, T. L.
Storage protein gene expression is localised to regions lacking mitotic activity in developing pea embryos. An analysis of seed development in Pisum sativum XIV 283

Hidalgo, A. and Ingham, P. W.
Cell patterning in the Drosophila segment: spatial regulation of the segment polarity gene patched 289

Kwong, L., Xie, Y., Daniel, J., Robbins, S. M. and Weeks, G.
A Dictyostelium morphogen that is essential for stalk cell formation is generated by a subpopulation of prestalk cells 303

Erratum: Reprinting of article by Cabrera, C. V.
Lateral inhibition and cell fate during neurogenesis in Drosophila: the interactions between ac2e, Notch and Delta. Development 109, 733-742
The Company of Biologists Limited, founded in 1925, is a 'Company Limited by Guarantee' having tax-exempt charitable status. There is a Board of Directors consisting of about 20 professional biologists, two of them appointed annually by the Society for Experimental Biology, who receive no salary or fees for their services. The Company's main function is to own and produce The Journal of Experimental Biology, the Journal of Cell Science and Development, and to appoint the Editors of these journals. These are part-time appointments held by established professional biologists of some eminence, and once they have been appointed the Company exercises no control over editorial policy.

The Company is precluded by its charitable status from making a commercial profit on its operations, and its aim is to produce high-quality journals at the lowest possible price. Any surplus on publishing not required for the journals' reserves is transferred to an Educational Trust Fund, which makes substantial grants in aid of societies concerned with the fields of interest covered by the Company's journals. Grants are also made to conferences and summer schools in the fields of its journals.
