Cover: Differentiated epithelial cells expressing keratin 79 (green) migrate out of developing hair follicles and mediate the formation of the hair canal, through which the hair fibre will later emerge. Basal epithelial cells expressing keratin 5 are shown in red. See Research article by Wong et al. on p. 4870.

SPOTLIGHT

4827 Conveying principles of embryonic development by metaphors from daily life
Shilo, B.-Z.

REVIEW

4830 Mechanisms of scaling in pattern formation
Umulis, D. M. and Othmer, H. G.

STEM CELLS AND REGENERATION

4844 Transdifferentiation and remodeling of post-embryonic C. elegans cells by a single transcription factor

4850 COUP-TFI controls activity-dependent tyrosine hydroxylase expression in adult dopaminergic olfactory bulb interneurons
Bovetti, S., Bonzano, S., Garzotto, D., Giannelli, S. G., Iannielli, A., Armentano, M., Studer, M. and De Marchis, S.

4860 Zebrafish midbrain slow-amplifying progenitors exhibit high levels of transcripts for nucleotide and ribosome biogenesis

4870 Keratin 79 identifies a novel population of migratory epithelial cells that initiates hair canal morphogenesis and regeneration

RESEARCH ARTICLES

4881 Short-range Wnt5 signaling initiates specification of sea urchin posterior ectoderm
McIntyre, D. C., Seay, N. W., Croce, J. C. and McClay, D. R.

4890 Cell delamination in the mesencephalic neural fold and its implication for the origin of ectomesenchyme

4903 The Xenopus homologue of Down syndrome critical region protein 6 drives dorsoanterior gene expression and embryonic axis formation by antagonising polycomb group proteins
Li, H.-Y., Grifone, R., Saquet, A., Carron, C. and Shi, D.-L.

4914 A new role for the calcineurin/NFAT pathway in neonatal myosin heavy chain expression via the NFATc2/MyoD complex during mouse myogenesis
Daou, N., Lecolle, S., Lefebvre, S., della Gaspera, B., Charbonnier, F., Chanoine, C. and Armand, A.-S.

4926 Different CHD chromatin remodelers are required for expression of distinct gene sets and specific stages during development of Dictyostelium discoideum

4937 Pebble/ECT2 RhoGEF negatively regulates the Wingless/Wnt signaling pathway
Greer, E. R., Chao, A. T. and Bejsovec, A.

4947 Insm1 controls development of pituitary endocrine cells and requires a SNAG domain for function and for recruitment of histone-modifying factors
Welcker, J. E., Hernandez-Miranda, L. R., Paul, F. E., Jia, S., Ivanov, A., Selbach, M. and Birchmeier, C.

4959 RPE specification in the chick is mediated by surface ectoderm-derived BMP and Wnt signalling

4970 N-glycosylation requirements in neuromuscular synaptogenesis
Parkinson, W., Dear, M. L., Rushton, E. and Broadie, K.

TECHNIQUES AND RESOURCES

4982 Efficient CRISPR/Cas9 genome editing with low off-target effects in zebrafish
Hruscha, A., Krawitz, P., Rechenberg, A., Heinrich, V., Hecht, J., Haass, C. and Schmid, B.

4988 zebrafish transgenic lines for in vivo bioluminescence imaging of stem cells and regeneration in adult zebrafish
