

Cover: 3D representation of an organoid grown from a single mouse mammary basal cell upon stimulation with prolactin. This organoid model, which recapitulates features of mammary tissue architecture (highlighted by F-actin and DAPI staining, blue) and function (milk protein, red), offers a versatile system for exploring tissue dynamics, cell fate and mechanisms of disease. See **Research report** by **Jamieson et al.** on p. 1065.

EDITORIAL

- 935 Organoids: a Special Issue
Little, M. H.

SPOTLIGHTS

- 938 The hope and the hype of organoid research
Huch, M., Knoblich, J. A., Lutolf, M. P. and Martinez-Arias, A.
- 942 Ethical issues in human organoid and gastruloid research
