

EDITORIAL

New Year Plans

James Briscoe*[§] and Katherine Brown[‡][§]

Scientific publishing has come under scrutiny in the last few years. There has been justifiable dissatisfaction with how some journals operate and this, together with changes such as online publishing, the Open Access movement and the increasing use of preprints, is leading to a transformation in how research is published. The pace of change and the resulting uncertainty has only heightened in recent months with the announcement of ‘Plan S’ by an international consortium of research funders. The aim of this initiative, also referred to as ‘cOAlition S’, is to mandate that ‘scientific publications on the results from research funded by public grants provided by national and European research councils and funding bodies, must be published in compliant Open Access Journals’. The laudable ambition is to make research findings immediately accessible for all to read. At the same time, the plan calls for an end to ‘hybrid’ journals, which publish both open access and subscription content. As *Development* is one such journal, we are paying close attention to this initiative.

At the moment we are still awaiting further details: it is unclear precisely when and how the plan will be implemented. There will likely be financial constraints, although it appears that a cap on Article Processing Charges (APCs) will no longer be set. We do not yet know how scientists who do not comply will be punished, nor is it clear how the many funders who are not part of cOAlition S will view this initiative (in particular, will they make additional APC funds available to authors?). Nevertheless, it is clear that this initiative presents both challenges and opportunities to academic journals. At *Development*, our mission is to publish the highest quality research in developmental biology, whether in our traditional areas or in new and emerging areas of the field. In our experience, the best way of doing this is through editorial assessment and prepublication peer review, overseen by research-active academic editors supported by experienced professional staff. We are pleased that Plan S promises to improve access to research, but we are adamant that this should not be at the expense of quality. There are unavoidable costs associated with maintaining quality and it is important that the financial aspects of Plan S do not place this in jeopardy. We believe that the role *Development* plays in assessing, improving and assembling the best research in developmental biology is valuable to the field.

But, *Development* is not just a repository for research papers. We provide a place for the developmental biology community to meet, discuss and exchange news. Alongside our research papers, we commission and publish reviews and commentaries that summarise and synthesise developments in the field. These include Hypothesis articles that explore new ideas, Primers that introduce concepts to those new to the field, and opinion pieces

from leaders in the field. To recognise and promote the medical and societal impact of developmental biology, in 2018 we started a series of articles advocating for the importance of our research beyond its immediate field (Maartens et al., 2018). This is most obvious in areas such as regenerative and reproductive medicine, in which technologies, including genome engineering and *in vitro* culture methods, are beginning to raise new and significant issues. *Development* provides a forum to discuss the history, ethics and practicalities of these approaches. As with our research papers, a review or commentary published in *Development* can be relied on to be trusted, responsible and insightful.

Development is also more than the papers we publish. As a not-for-profit organisation, we act as a charity to support and foster the community. We fund developmental biology societies, conferences and workshops that allow developmental biologists, in all corners of the world, to come together to discuss their latest research and exchange ideas. Moreover, we run the Travelling Fellowships scheme, which funds visits by graduate students and post-doctoral researchers to other laboratories, for periods of a few weeks to a few months, to pursue collaborative projects. This scheme is open to scientists worldwide and the application process is very simple; the next deadline is March 15th 2019. In addition, we support and run both the Node and preLights. The Node goes from strength to strength, typically receiving more than 10,000 visitors a month. Although preLights is a much newer initiative, early indications are that it is proving popular, helping readers to navigate the large number of preprints and it is beginning to stimulate scientific discussion of new results.

All these endeavours cost money, of course, but we believe that they are worthwhile as they offer unique and indispensable contributions to the field that other organisations, whether commercial publishers or funding agencies, do not support. We hope that whatever the eventual details, Plan S will allow us to continue supporting and promoting our field as well as publishing great developmental biology research. Consultations about cOAlition S by the European Commission and various funding agencies are currently ongoing. We will be making our views clear and we would also encourage readers of *Development* to engage with the consultations and make their feelings known. Scientific publishing and the role of journals is integral to our field and it is important that changes are to the benefit of all science and scientists. It would be a shame if the consequences of Plan S are to unintentionally disadvantage groups of scientists or to undermine confidence in science.

The start of the year is a time for renewal and you will notice a few changes to *Development* from this month. As well as the changes to the editorial team announced in the previous editorial, we have overhauled our Editorial Advisory Board to bring in some fresh names and to ensure we have expertise that covers the increasing breadth of developmental biology. The board provides invaluable support to *Development* – not only in providing advice about the suitability of papers for the journal, but also in giving input on important strategic decisions. I would like to thank the continuing,

*Editor-in-Chief, *Development*
[‡]Executive Editor, *Development*

[§]Authors for correspondence (james.briscoe@crick.ac.uk; katherine.brown@biologists.com)

 J.B., 0000-0002-1020-5240; K.B., 0000-0001-9110-8276

as well as the outgoing, members for their enduring help and support, and welcome the new members of the board.

A couple of years ago we introduced cross-referee commenting to the peer review process. This allows reviewers to see and comment on each other's reviews to provide extra feedback to help the editor decide on the appropriate course of action. This is now working well and, although referees only avail themselves of the opportunity in about a quarter of all cases, it helps to generate more consensual outcomes and clarify uncertainties. We encourage reviewers to use this facility if they feel that it will be useful for the editor. This year, in the next step to improve the transparency and quality of peer review, we will begin to publish reviewers' comments alongside the accepted papers. One thing that stands out about *Development* is the high standard of the refereeing; this ensures confidence in the work we publish and is appreciated by authors. Now readers will also be able to read referees' and the editor's comments as a companion to the final paper. You will find these as a PDF in the 'Info & Metrics' tab on a paper. Those of you who review for the journal, please note that – by agreeing to review – you are agreeing to have your comments published (anonymously); authors wishing to opt out of having the peer review history published will be able to do so.

Scientifically, 2019 is already shaping up to be a bumper year for *Development*. We have a Special Issue on 'Development at the single cell level', guest edited by Barbara Treutlein and Allon Klein. The full content will be available in June, but you will begin to see research papers for this issue come online as they are accepted – with the first one being published this month. Our next Special Issue will focus on Chromatin and Epigenetics. Recent years have seen huge advances in our understanding of how DNA and histone modifications, chromatin architecture and nuclear organisation impact on gene expression to

drive developmental processes. Moreover, we now have a much greater appreciation for the complex layer of RNA-based regulation that can exert epigenetic effects on cellular and organismal phenotypes. This understanding, combined with technological advances – from genome-scale assays of transcription factor activity and 3D chromatin structure, to dynamic imaging of transcription at individual loci – now provide unprecedented opportunities to examine how chromatin-based and epigenetic mechanisms regulate development across the plant and animal kingdoms. Several of our editors – Benoit Bruneau, Haruhiko Koseki, Susan Strome and Maria-Elena Torres-Padilla – are experts in this field and they will be coordinating this Special Issue. The deadline for article submission is March 31st 2019 and the issue will be finalised in late 2019, although as with all our content, continuous publication means that we will publish articles as soon as they are accepted. For more information, please visit dev.biologists.org/content/chromatin.

Finally let us close by thanking you: our readers, authors and referees. All those who reviewed for the journal in the past 12 months are listed in the supplementary information. We are enormously grateful for your time and dedication. Similarly, thank you to all our authors. We look forward to receiving further studies from you. On that note, let's make a collective New Year's resolution: that we each submit a paper to *Development* in 2019.

Taryn Sumabat, University of California, United States
Tatiana Petrova, Centre Pluridisciplinaire d'oncologie, Switzerland
Tatjana Piotrowski, Stowers Institute for Medical Research, United States
Tatjana Sauka-Spengler, University of Oxford, United Kingdom
Tatsumi Hirata, National Institute of Genetics, Japan
Tatsuya Kobayashi, Massachusetts General Hospital, United States
Teresa Rayon, The Francis Crick Institute, United Kingdom
Terry P Yamaguchi, National Cancer Institute-Frederick, NIH, United States
Tetsuhiro Kudoh, University of Exeter, United Kingdom
Tetsuya Nakamura, Rutgers, The State University of New Jersey, United Kingdom
Teva Vernoux, ENS Lyon, France
Thierry JAFFREDO, CNRS, France
Thijs van Boxtel, The Francis Crick Institute, United Kingdom
Thomas Boettger, Max-Planck-Institut für Heart and Lung Research, Germany
Thomas Brand, Imperial College London, United Kingdom
Thomas Braun, Max-Planck-Institut für Heart and Lung Research, Germany
Thomas F Schilling, University of California, Irvine, United States
Thomas Greb, Heidelberg University, Germany
Thomas Gregor, Princeton University, United States
Thomas Gridley, Maine Medical Center Research Institute, United States
Thomas J. Carroll, University of Texas Southwestern Medical Center, United States
Thomas Lamonerie, Institut de Biologie Valrose, France
Thomas Lecuit, CNRS-University of Marseille, France
Thomas Liebenstein, University of Bayreuth, Germany
Thomas Mindos, Fritz Lipmann Institute, Germany
Thomas Pujol, CRG, Spain
Thomas Schmulling, Free University of Berlin, Germany
Thomas Theil, University of Edinburgh, United Kingdom
Thomas Thumberger, Heidelberg University, Germany
Thomas W Holstein, Heidelberg University, Germany
Thomas W. Cline, University of California, Berkeley, United States
Thorold W Theunissen, Washington University School of Medicine in St. Louis, United States
Tianlu Ma, Johns Hopkins University, United States
Tiffany Heanue, Francis Crick Institute, United Kingdom
Tim Ott, Universitaet Hohenheim, Germany
Tim Schedl, Washington University Sch of Med, United States
Timothy E Kennedy, McGill University, Canada
Timothy F Plageman, The Ohio State University, United States
Timothy R Gershon, University of North Carolina at Chapel Hill, United States
Timothy T Weil, University of Cambridge, United Kingdom
Ting Xie, Stowers Institute, United States
Todd Blankenship, University of Denver, United States
Todd Evans, Weill Cornell Medical College, United States
Todd Nystul, UCSF, United States
Todd Starich, University of Minnesota, United States
Tom Fleming, University of Southampton, United Kingdom
Tom Millard, University of Manchester, United Kingdom
Tom Vondriska, University of California, Los Angeles, United States
Tomasz J Nowakowski, UCSF, United States

Tomoko Kaneko-Ishino, Tokai University, Japan
Tomonari Hayama, Oregon Health & Science University, United States
Tony DeFalco, Cincinnati Children's Hospital Medical Center, United States
Tony Harris, University of Toronto, Canada
Tony Marchand, Albert Einstein College of Medicine, United States
Tony Rossi, New York University, United States
Torsten Krude, University of Cambridge, United Kingdom
Toshihiro Uesaka, Graduate School of Medicine, Kobe University, Japan
Travis Kent, The Jackson Laboratory, United States
Trista North, Beth Israel Deaconess Medical Center, United States
Tristan Bouschet, Institut de Génomique Fonctionnelle, France
Tristan Rodriguez, Imperial College London, United Kingdom
Tully Michael Underhill, The University of British Columbia, Canada
Tzumin Lee, Janelia Farm Research Campus/HHMI, United States
Ulrich Rüter, Heinrich-Heine-University, Germany
Ulrich Technau, University of Vienna, Austria
Ulrich Tepass, University of Toronto, Canada
Urs Fischer, Umeå Plant Science Centre, Sweden
Urs Schmidt-Ott, University of Chicago, United States
Ursula Goodenough, Washington University, United States
Utpal Banerjee, Univ of California, United States
Uwe Irion, Max Planck Institute, Germany
Valentina Greco, Yale Medical School, United States
Valérie Castellani, University of Lyon, University of Lyon1, France
Valerie Gouon-Evans, Boston University School of Medicine, United States
Valerie Kouskoff, University of Manchester, United Kingdom
Valerie Reinke, Yale University School of Medicine, United States
Valerie Wallace, Toronto Western Research Institute, Canada
Valerie Wilson, University of Edinburgh, United Kingdom
Vanessa Nieto Estevez, The University of Texas at San Antonio, United States
Vassilis Pachnis, The Francis Crick Institute, United Kingdom
Veit Riechmann, Heidelberg University, Medical Faculty Mannheim, Germany
Venugopala G. Reddy, University Of California, Riverside, United States
Veronica Hinman, Carnegie Mellon University, United States
Veronica Moreno-Juan, Instituto de Neurociencias de Alicante, Spain
Veronique Lefebvre, Children's Hospitals of Philadelphia, United States
Victor Borrell, CSIC - Universidad Miguel Hernández, Spain
Victor Hatini, Tufts University School of Medicine, United States
Vidu Garg, Nationwide Children's, United States
Viktor Zarsky, Institute of Experimental Botany, Czech Republic
Vil Fernandes, New York University, United States
Vincent Cunliffe, University of Sheffield, United Kingdom
Vincent Galy, IBPS, UMR7622-CNRS-UPMC, France
Vincent Mirouse, GReD laboratory, CNRS UMR6293, INSERM U1103, France
Viola Willemsen, WUR, Netherlands
Virginia E Papaioannou, Columbia University Medical Center, United States
Virginie Lecaudey, University of Frankfurt, Germany
Volker Hartenstein, UCLA, United States
Wado Akamatsu, Keio University, School of Medicine, Japan
Wayne Forrester, Indiana University, United States
Wei Dai, University of California, United States
Wei Li, Eye Institute, Xiamen University, China
Wei Ling Chang, University of Southern California, United States
Wei Yan, University of Nevada, Reno, United States
Weichun Lin, UT Southwestern Medical Center, United States
Weilan Ye, Genentech Inc., United States
Wellington V Cardoso, Columbia University Medical Center, United States
Wendy Dean, The Babraham Institute, United Kingdom
Wenjun Guo, Albert Einstein College of Medicine, United States
Wes Grueber, Columbia University, United States

William G Wadsworth, Rutgers Robert Wood Johnson Medical School, United States
William Harris, Cambridge University, United Kingdom
William Klein, Columbia University, United States
William Pu, Childrens Hospital Boston, United States
William Sullivan, University of California, United States
William Talbot, Stanford University, United States
Wilson K Clements, St Jude Children's Research Hospital, United States
Wolfgang Lukowitz, University of Georgia, United States
Wolfgang Schmidt, Academia Sinica, Taiwan
Wolfram Goessling, Harvard Stem Cell Institute, United States
Xavier Belles, Institute of Evolutionary Biology (CSIC-UPF), Spain
Xavier Morin, Institute of Developmental Biology of Marseille, France
Xianghu Qu, Vanderbilt University Medical Center, United States
Xiaochun Bai, Southern Medical University, China, China
Xiaohui Lyu, Sloan-Kettering Institute, United States
Xin Chen, Johns Hopkins University, United States
Xin Lou, Nanjing University, China
Xin Sun, University of California, United States
Xin Zhang, Columbia University, United States
Xin-Yun Huang, Cornell University, United States
Xiuchun Cindy Tian, University of Connecticut, United States
Yacine Graba, CNRS-University of Marseille, France
Yanhai Yin, Iowa state, USA, United States
Yannick Schwab, EMBL, Germany
Yewei Xing, University of Michigan, United States
Yi Ariel Zeng, Shanghai Institute of Biochemistry and Cell Biology, Chinese Academy of Sciences, China
Yi Li, Baylor College of Medicine, United States
Yi-Hsien Su, Academia Sinica, Taiwan
Yingyu Mao, Columbia University, United States
Yingzi Yang, Harvard University, United States
Yi-Quan Wang, Xiamen University, China
Yka E Helariutta, University of Cambridge, United Kingdom
