PUBLISHER’S NOTE

Expression of Concern: The polarity factor Bucky ball associates with the centrosome and promotes microtubule rearrangements to establish the oocyte axis in zebrafish by Forbes et al. Development doi: 10.1242/dev.129023

Olivier Pourquie
Editor in Chief, Development (dev@biologists.com)

This Expression of Concern relates to the Advance Article ‘The polarity factor Bucky ball associates with the centrosome and promotes microtubule rearrangements to establish the oocyte axis in zebrafish’ (doi: 10.1242/dev.129023).

The corresponding author of this article, currently posted online as an Advance Article, contacted us regarding potential issues with some of the data contained in this manuscript. The authors are currently investigating the matter, in consultation with their Research Integrity Office.

Development is publishing this Expression of Concern to alert readers to the situation while the investigation takes place, and it is not a statement as to the validity of the data. The article will remain posted on the Advance Articles page until the matter is resolved.

This course of action follows the advice set out by COPE (Committee on Publication Ethics), of which Development is a member.
